

I-131 Procedure List:

Prior to receiving the I-131 treatment, the patient needs the following diagnostics performed with the primary care veterinarian

- Cbc, chemistry, T4, free T4 and urinalysis within a month of I-131 treatment
- 3 view radiograph of the thorax

In addition to the diagnostics, the patient will need to stop methimazole treatment 2 weeks prior to I-131 treatment

We will need the radiographs and bloodwork results prior to the I-131 treatment.
